

Junior Flutter Developer Job Application

Date: 8 Aug 2022

Dear Sir/Mam,

I had just completed my Bsc (Hons) Computing from Itahari International College (Waiting For Graduation Ceremony). Now I am thinking of building career as a Flutter Developer by spending my next years in Software Companies on Kathmandu. I have come to know about your company and possible vacancy for me thanks to online job portals.

I have 1 years of real world experience on Flutter through my Internship, developing Online Gharjagga App and developing a Multiplayer Self productivity App, Digi3Map for my college's final year project. Not only that I started my programming journey since class 11 so I have strong foundation on programming. After +2, I also took 3 month Native Android course, so I have little bit knowledge of Native android too. I have attached my Resume where all of my expertise can be found.

With that experience, I had written this letter with a hope to get Junior Flutter Developer Job In your Company. Although currently I am applying for Junior Developer Job, I ensure that I don't need lots of years to accelerate to be senior developer because I already have strong foundation of Flutter and Programming Concepts. Junior developer just means I am searching for guidance from senior teammates/mentors to get experience of working professionally, systematically and correctly in real world market.

My expectations are,

- Initial 1 month or may be even 2 months Salary to adapt to the company : 25k per month
- Actual Salary as a Junior Developer: Starting From 30k per month
- Position: Physically, Full Time Flutter Developer
- Working Environment: Good Mentors/Teammates

And with this expectations, you can also expect me to give my best on my given tasks and given responsibilities leaving no place of regret on the recruitment team on hiring me in your company.

Hoping for your response, regardless of whether its positive or negative.

Sincerely Yours

Aaradhya Gopal Nepal
