Mid Level Flutter Developer Job Application

Dear Sir/Mam,

After doing lots of research on LinkedIn and Online Job Portals, I came to know about your company and possible vacancy for me in your company.

I have 1 years of real world experience on Flutter through my 6 months Internship/paid project named **Online Gharjagga App** at Bytecare Technology. And 6 months developing a Multiplayer Self productivity App, **Digi3Map** for my college's final year project at Itahari International College. Not only that, I started my programming journey in class 11 so I have a strong foundation on programming, Git and Sql. After +2, I also took a 3 month Native Android course, so I have little bit knowledge of Native android too. I have attached my Resume where all of my expertise can be found.

With that experience, I had written this letter with a hope to get a mid level Flutter Developer Job In your Company. Although currently I am applying for a mid level Developer Job, I ensure that I don't need lots of years to accelerate to be a senior developer because I already have a strong foundation of Flutter and Programming Concepts.

My expectations are,

- Minimum/Starting Salary 20 k -25k
- Position: Physically, Full Time. Mid Level Flutter Developer

And with these expectations, you can also expect me to give my best on my given tasks and given responsibilities leaving no place for regret on the recruitment team for hiring me in your company.

Hoping for your response, regardless of whether it's positive or negative.

Sincerely Yours

Aaradhya Gopal Nepal
